HTTP 500 - Internal server error
Internet Explorer

If you get an error: "The page cannot be displayed", the error is received because DNS on the machine requesting the license file is not configured properly. You should be able to ping the machine by its fully qualified hostname to be able to access this site. This issue can be resolved by doing one of the following:

A. Remove the DNS suffix from the URL and refresh the page. For example, change:

`http://<customershostname>.<dnssuffix>:8080/PS_TRANSLATE?filename=webreg.html`

to

`http://<customershostname>:8080/PS_TRANSLATE?filename=webreg.html`

- or -

B. Replace the fully qualified hostname in the URL with the word 'localhost' and refresh the page. (Ex. `http://localhost:8080/PS_TRANSLATE?filename=webreg.html`) Configure DNS properly and make sure that the DNS suffix listed in TCP/IP Advanced Properties "DNS suffix for this connection" is the correct DNS suffix for that machine.

If you are using a proxy server, you will have to disable it temporarily, choose: Control Panel > Internet Options > Connections > LAN Settings > and uncheck (disable) the Proxy server.

Then repeat step 11.A.

If you have a firewall, you may need to disable it temporarily.

Then repeat step 11.A.

When successful, you should have see a web similar to:

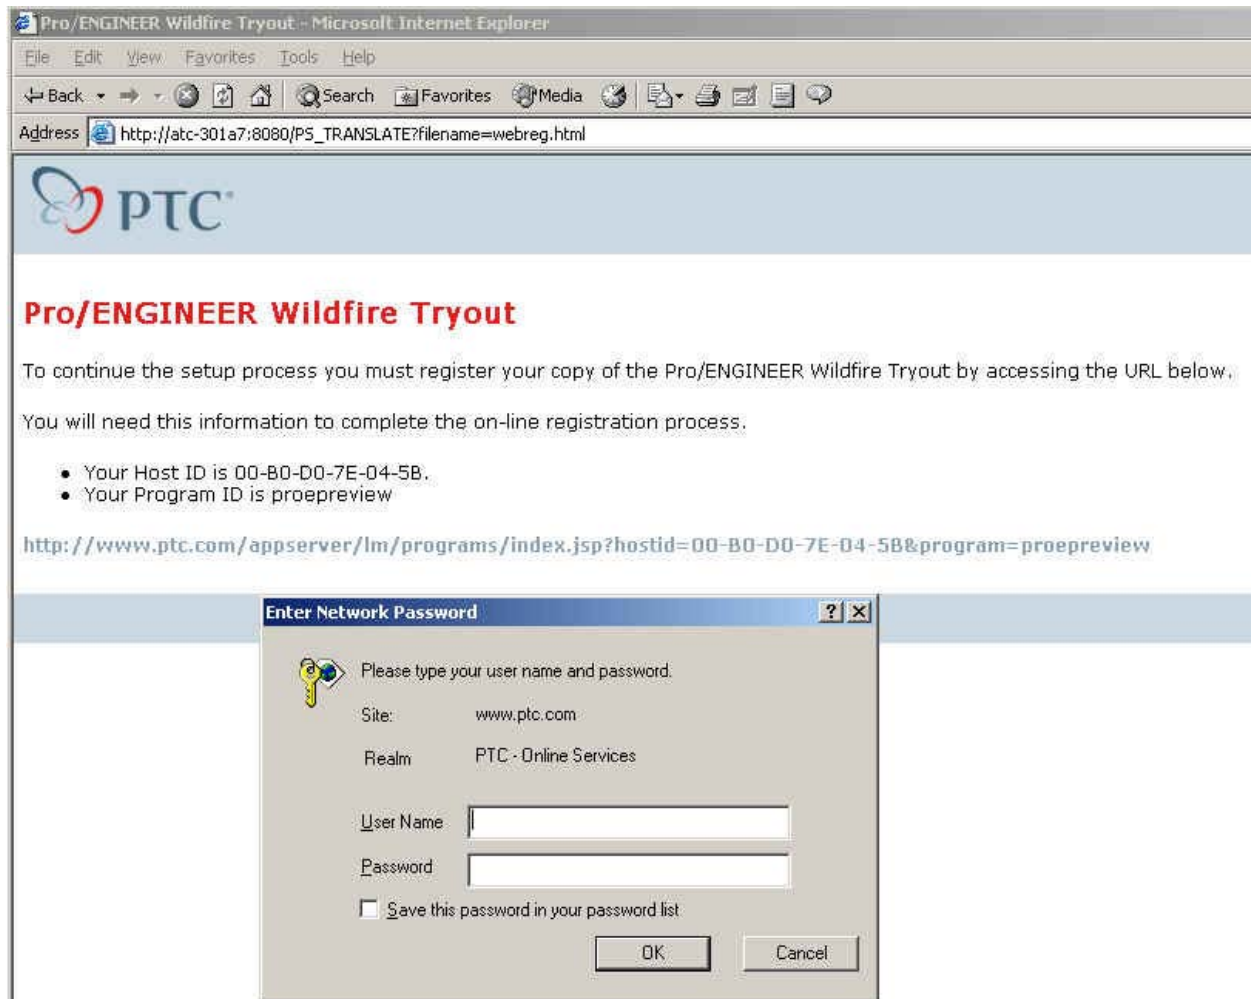

(`http://atc-301a7:8080/PS_TRANSLATE?filename=webreg.html`)
